

Day 7

Year 4 tasks

English

Practise writing a sequence of instructions.

It could be for making a sandwich, making a puppet or making your bed.

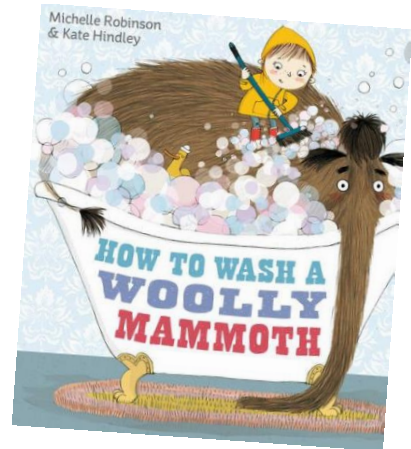

Remember to:

*use time words e.g. First, Next, Then, After that, Eventually, Finally

*write in the present tense

*use clear step by step instructions

*use imperative (bossy) verbs and adverbs e.g. Pour slowly

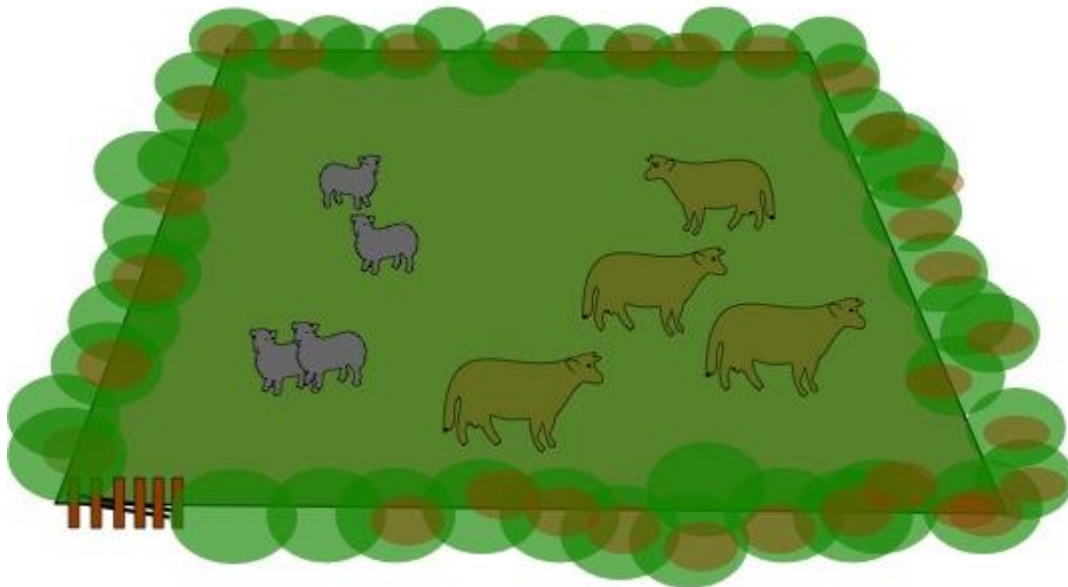

You could use these pictures for making a sandwich.

Maths

Cows and Sheep

In this field we could say, because of the number of animals there, that each cow can see 4 sheep and 3 (other) cows. This could be worded as follows "Each cow can see one more sheep than cows." There are obviously 4 sheep and 4 cows in the field as you see it.

But here are some questions about different fields in which you have to find out how many sheep and cows there are in each field.

In field number 1, each cow can see twice as many sheep as cows; each sheep can see the same number of sheep as cows, so how many cows and sheep are there?

In field number 2, each cow can see three times as many sheep as cows; each sheep can see the same number of sheep as cows, so how many cows and sheep are there?

In field number 3, each cow can see twice as many sheep as cows; each sheep can see one more sheep than cows, so how many cows and sheep are there?

In field number 4, each cow can see twice as many sheep as cows; each sheep can see two more sheep than cows, so how many cows and sheep are there?

In field number 5, each cow can see three times as many sheep as cows; each sheep can see twice as many sheep as cows, so how many cows and sheep are there?

Science

Light and Dark

Make a 'Starry Night' with everyday items we all have lying around our house.

All you need is a colander (or you could poke some holes in a box), flashlight, torch from a phone or a lamp, and a dark room. Stick your light source underneath the colander, and turn off the main light in the room - make sure the blind/curtains are closed too! The room is instantly filled with stars that will amaze you!

Experiment with what happens when you put your hand over the holes. What about when you rotate the colander? Or lift it up further away from the light? It's a great way to explore light, darkness, and shadows in a fun way.
